

CARVEL-P2.38

2 3/8 " ROUND TRAFFIC POST SYSTEM

Stronger, more stable and more versatile than traditional posts, the PSR2.37 round signpost rates higher in terms of load, clearing height (now at 2.3 m – 90.6"), and angle adjustments for reflectivity. Made of galvanized steel, they come rough/galvanized and black powder coated. The PSR2.37 are designed to fit in the sleeve anchors (see Technical Sheet) for a better resistance against oscillating effect caused by winds. They can also easily be pulled out for snow removal operations or other purposes with the extractor tool. The locking device renders unauthorized removal of traffic posts impossible. Compatible with most signage accessories on the market, the PSR2.37 round signposts are as reliable as durable while being affordable.
